

Clario certified sites

Vetted Phase I sites for precise ECG data collection

What are certified sites?

Clario works with a network of pre-screened Phase I sites properly trained and equipped to collect reproducible, high-quality ECG data.

Well-suited to conduct single ascending dose (SAD), multiple ascending dose (MAD) and thorough QT (TQT) studies, these sites understand the criticality of ECG precision in Phase I studies. Their quality ECG data collection can place sponsors in the best position to request a TQT waiver, potentially saving millions of dollars.

Sites continuously
evaluated to meet data
quality standards

What are the benefits?

Sponsors gain confidence from a trusted site that is proven to generate quality data.

Consulting and science

- Complimentary protocol review on every study
- Access to a broad panel of cardiac experts who eliminate the guesswork for site and device selection

Additional services

- Concierge operational and technical oversight above and beyond standard service
- Assurance of data quality via an advanced, AI-based quality scoring tool

Innovative collaboration

- Heightened client engagement through wearables and other new strategies
- Ability to leverage a network of sites that have been shown to meet strict quality standards

Enhanced options

- Reduced data collection and storage costs
- Multiple data collection options available depending on the site

Increase sponsor confidence in site performance with a Clario certified site.
