

ERT REAL-TIME DATA EXCHANGE

Get a unified view of your integrated study and program data

MULTIPLE SYSTEMS BURDEN STUDY TEAMS

During the course of a trial, study teams require real-time visibility into the performance of their trial to support risk-based monitoring and overall quality management review. However, the growing number of disparate systems creates a burden on data management teams and leads to time-consuming tasks that inhibit study managers' ability to generate trial insights and mitigate risk.

CENTRALIZE DATA WHERE AND WHEN IT'S NEEDED

Regardless of location, ERT Real-Time Data Exchange seamlessly transfers data at the optimal frequency for better visibility into trial performance. Our data exchange solution supports fully bi-directional inbound and outbound exchanges with external data sources, whether integrating with an electronic data capture (EDC) system, data warehouse, or third-party data sources. Clients can receive study data on a more frequently scheduled basis (e.g. hourly, daily, etc.) with an intended use of monitoring trends and mitigating risks.

RELY ON OUR 40+ YEARS CLINICAL TRIAL EXPERIENCE AND 25+ SYSTEM INTEGRATIONS

COMBINE ERT STUDY AND PROGRAM DATA WITH ANY eCLINICAL DATA SOURCE IN ONE CLOUD-BASED REPORTING AND ANALYTICS PLATFORM

ACCESS DATA BASED ON YOUR EXPECTED FREQUENCY AND REQUIREMENTS

To ensure alignment between multiple data sources for studies with ERT data, sponsors or CROs should perform data reconciliation using the monthly data transfers provided by ERT by comparing this output against other clinical data sources (e.g. EDC, IXRS). When discrepancies are found and sites are queried by data managers, confirmation of data cleaning efforts can be delivered back to ERT to ensure consistency in the data sources.

DATA TRANSFER FILES

2

REAL-TIME DATA EXCHANGE

ERT DATA EXCHANGE

Timely

Exchange data as often as needed with powerful processing capabilities

Scalability

Adapt to needs of managing large data volumes with robust architecture

Fidelity

Receive data consistent with standard monthly data file transfer
